

#### steam lobby generator

- it needs to work for all steam games if you set it up
- provide clear instructions on how to set it up
- hide itself whenever it's setup
- the exe file will only create the files required to set it up
  - it will make the .bat
  - makes a copy of the python script in the games directory
- 

needs url to your steam profile

- needs to be public
- needs paths to the game itself

#### my user exp should be

1. user downloads the program
2. user opens the exe, prompting an initial setup
3. user must enter steam profile link and reminded that it only works if your steam profile is public
4. prompt user to set up the script for a game, ask for the filepath to the game and provide instructions on how to find that
5. user provides file path, and the program creates a new .bat file in the filepath specified
6. prompt the user to add the %COMMAND% in the launch options
7. after doing so, say that theyre done, and that they can exit the program

if the user has already set up profile, then display a different screen that asks if you need to change your profile, or if you want to add the support to another game

have two different exes, one for the setup, and the other exe that actually handles the copying of steam links
